

ISW acquires Syntegrity Solutions to strengthen its Data & Integration practice across Australia

Australia, September 2026

ISW has acquired Syntegrity Solutions, formalising a long-standing partnership and significantly expanding ISW's Data & Integration practice. The acquisition positions ISW as one of Australia's most complete data and integration partners for enterprise and government clients.

A STRATEGIC COMBINATION

Founded in 2010, Syntegrity has built a strong reputation as a premier Australian integration specialist, with deep expertise in **IBM Cloud Pak for Integration, IBM DataPower, and MuleSoft**. It has delivered robust enterprise solutions for government agencies, insurers, large financial institutions, manufacturers, and retailers across the country.

ISW brings established partnerships with **IBM, Microsoft, AWS, Informatica, Snowflake, and Databricks**. Together, the two organisations cover the full spectrum of modern data and integration capability – from hybrid cloud integration and legacy modernisation, through to data governance, advanced analytics, and AI-ready data platforms.

The acquisition also carries timely strategic significance. **Informatica, a key ISW partner, was acquired by Salesforce in 2025 – bringing it under the same parent company as MuleSoft, Salesforce's integration platform.** ISW now holds strong alignment with both technologies, deepening its position within the Salesforce data ecosystem while maintaining its long-standing IBM partnership and broadening the combined business's reach across enterprise data and integration environments.

"Syntegrity and ISW have worked closely together for many years, and this acquisition is a natural evolution of that relationship. Bringing their integration and API management expertise fully into ISW means our clients can now access a genuinely end-to-end data capability – from infrastructure and cloud through to the critical integration layer that ties it all together."

Adam Brown
Managing Director, ISW

WHAT THIS MEANS FOR CLIENTS

The combined business strengthens ISW's proposition across six key areas:

- **API management and integration** – expanded platform coverage and delivery capability across IBM, MuleSoft, and Microsoft environments
- **Data quality and governance** – broader expertise to migrate and manage data in cloud environments with confidence and control
- **Data platform and analytics** – strengthened capacity to build and maintain modern data platforms across Snowflake, Databricks, and Microsoft
- **Hybrid cloud integration** – greater ability to connect legacy, on-premises, and cloud environments across any technology stack
- **Legacy system modernisation** – Syntegrity's integration expertise paired with ISW's infrastructure and platform experience
- **Managed services** – **ISW's Data & Integration practice has doubled in capacity**, significantly expanding the team's ability to support clients at scale

Clients can now access a complete data pathway – from the secure integration and movement of data across hybrid environments, through to governance, advanced analytics, and AI and machine learning initiatives – through a single trusted partner, reducing complexity and accelerating time to value.

"What this combination really delivers is strength in numbers. Our expanded team means deeper capability across some of our key vendor partnerships – IBM, Microsoft, Salesforce and beyond – so clients get more expertise, more capacity, and a broader partner ecosystem, all through a single team that can support them at every stage of their data and integration journey."

Nick Young

Practice Lead – Data & Integration, ISW

ABOUT ISW

ISW is an Australian technology company delivering digital transformation, data intelligence, modern workplace, cloud migration, and security solutions to enterprise and government clients across Australia and internationally.
